Formula For Establishing a Handicap:

1. An archer's handicap shall be computed on the official NFAA field and/or hunter round, and shall be computed by the following table:

Best score of 2 scores ----80% of average differential2 best scores of 5 scores ----80% of average differential3 best of last 7 scores ----80% of average differential

The first and second methods shall be computed only for those archers who have not recorded the minimum of seven scores needed for a full handicap.

- 2. An archer's handicap shall be derived only from those scores shot within the last twelve (12) month period.
- All handicaps must be established during a tournament held on official NFAA targets, approved NFAA 2-star Range or higher, and where official NFAA field or hunter rounds are shot.
- 4. The differential is the difference between the actual average and perfect. (Example: Last 7 scores are 430, 415, 440, 460, and 410. The best 3 scores are 440, 450, and 460. Average = 450.560 minus 450 = 110. 80% of 110 equals 88, which is the handicap.
